To Whom it May Concern:

I have been working with Anthony Lee since March 2011 when he started his Master thesis under my supervision. In his Master thesis Anthony proposed a development process to develop adaptive component-based applications based on the work of a previous PhD student. The numerous discussions we had together revealed Anthony's positive attitude towards life and his interest to his work. He was continuously making questions to allow him to go further on his work. I found him to be a dedicated and industrious student.

For all these reasons, Anthony started a PhD in January 2011 under the supervision of Antoine Beugnard, Jean-Marie Gilliot and myself. His work is also based on component-based applications but he focussed on deployment of such applications. Until now Anthony is confirming his ability to perform research. He is well motivated, hard working, and independent. Advice guidance has of course to be done, but at the level of ideas, directions, priorities. Once goals are set, we do not have to worry about Anthony's progress. In due course, Anthony brings the results back. Moreover, once per week, Anthony has decided to write a small abstract of this work during the week.

For all these reasons, I strongly recommend Anthony for participating in the student volunteer program of the ICSE Conference
