Cloud Native Application Development

Mr. Vijay Rajagopal

Pivotal

Dubai, UAE

Abstract

In the past decade, while enterprises across the world were busy adopting technology to support their business, startups such as Uber, Airbnb, Nest were disrupting traditional industries. Ever wondered how startups with limited resources could challenge traditional enterprises in their own business? The answer is taking a Software-first approach where business models are defined by software and not supported by software. This talk will discuss the emerging trends in software development that are collectively called as Cloud Native Computing Approach which allows companies to turn ideas to reality in days or weeks rather than months.

About the Speaker

Vijay Rajagopal is an advisory consultant at Pivotal helping Enterprises to transform their software development culture and to help them adopt a silicon valley mindset. He helps customers adopt a Cloud Native approach for software development and thereby become a software-first business. Vijay started his career as a Technical Consultant with Oracle in 2003 and worked with Oracle for 10 years on various large-scale implementations of ERP, CRM, SOA and Big Data technologies for a number of large enterprises in EMEA. He then spent couple of years in Software AG specializing in SOA, BPM and Big Data technologies and finally joined Pivotal to focus on modern software development.
